

Solution Architecture

Date	29 September 2026
Team ID	SWTID-2026-7995
Project Name	LegalEase AI
Maximum Marks	5 Marks

Solution Architecture Diagram

The architecture below represents the implemented LegalEase AI flow from user interaction to AI-assisted document generation and export.

Component Details

Component	Technology	Role
User Interface	Streamlit	Collects document type and user-provided details / terms and displays the generated result.
Backend	FastAPI	Handles application requests and connects the frontend workflow with the AI generation service.
AI Service	Gemini	Generates legal document content from the supplied document type and information.
Document Output	Python document processing / export	Prepares the generated document for review and export in TXT, DOCX, or PDF format.
Source Management	Git / GitHub	Stores and manages the project source code and project documentation.

End-to-End Flow

1	User selects the required document type.
2	User enters the required details or terms.
3	Streamlit sends the request through the FastAPI backend.
4	Gemini generates the document content.
5	The generated document is shown for review and editing.
6	The user exports the final document as TXT, DOCX, or PDF.
