Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of the implemented LegalEase AI solution. The application follows the implemented workflow: Streamlit frontend → FastAPI backend → Gemini → generated document → review/edit → TXT/DOCX/PDF export.

Evaluation Checklist:

S.No	Evaluation Parameter	Implementation / Evidence
1	Well-structured code	The solution is divided into frontend, backend/API, Gemini generation, document formatting and testing modules.
2	Core problem addressed	The application helps users generate basic legal documents from selected document type, details and terms.
3	Working functionality	Users can enter document requirements, generate a draft, review/edit it and export the result.
4	Required source files	Python application files, configuration/dependency files and supporting modules are maintained in the project repository.
5	AI integration	Gemini is used through the backend generation layer to create the requested document content.
6	Document export	The solution supports TXT, DOCX and PDF output through the document formatting/export module.

Solution Details:

Item	Details
Code Repository	LegalEase AI GitHub repository
Programming Language	Python
Frontend Technology	Streamlit
Backend Technology	FastAPI
AI Technology	Gemini
Document Processing / Export	TXT, DOCX and PDF
Source Management	Git / GitHub
