Programming Language	Python	Used to develop the application logic, backend services and document processing.
Frontend	Streamlit	Provides the web interface where the user selects the document type, enters details and views the generated document.
Backend / API	FastAPI	Handles backend requests and connects the frontend flow with the AI generation service.
Generative AI	Gemini	Generates the required legal document content based on the selected document type and user-provided details or terms.
Document Export	TXT / DOCX / PDF	Allows the user to save the generated document in commonly used formats.
Development Environment	VS Code	Used for writing, running and managing the project source code during development.
Version Control	Git / GitHub	Used to maintain and submit the project source code and documentation.

Application Flow

1. User Input	User selects a document type and enters the required details / terms.
2. Streamlit	Collects the input and displays the generated result.
3. FastAPI	Receives the request and handles communication with the AI service.
4. Gemini	Generates the legal document content from the supplied information.
5. Export	The reviewed document can be exported as TXT, DOCX or PDF.
